

The Task List application

The **Task List Application** is a Web Application that allows the User to enter and save a list of tasks. Each task is described with a short piece of text. The User enters the task description in the *Task* box and then clicks the *Add Task* button to append the description to the end of the *Task List*. When the User clicks the *Clear Tasks* button, the whole Task List is deleted.

The Task List is saved until the User clears it. If the User closes the Browser (or the Browser window) and then reopens it later, the same task list will still be there.

You must implement this application using HTML, CSS, JavaScript in the Browser. The application is not permitted to use a Web Server. (Hint: Use the *localStorage* object to store the Task List.

The screenshot shows a web application titled "Task List" in blue text. On the left, there is a form with a label "Task" above a text input field. Below the input field are two buttons: "Add Task" and "Clear Tasks". On the right, there is a text area labeled "Task List" containing three lines of text: "Finish current project", "Meet with Mike", and "Get specs for new project". The text area has a small icon in the bottom right corner, likely for clearing the content.
